

WHAT IS PUBLIC POWER?

Just like community-owned schools, parks, police and fire departments, your public power utility is part of the community. A public power utility is a not-for-profit, community-owned electric system that works to provide the highest quality, most reliable power to residents and businesses.

Public power is a part of the community and focuses on what is best for the people they serve.

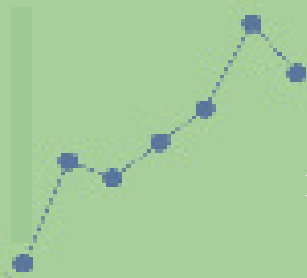

COMMUNITY OWNED

Communities own their public power utilities, meaning they have more control and reap all the benefits.

NO EXTERNAL SHAREHOLDERS

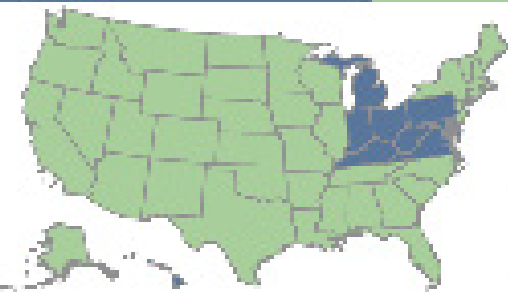

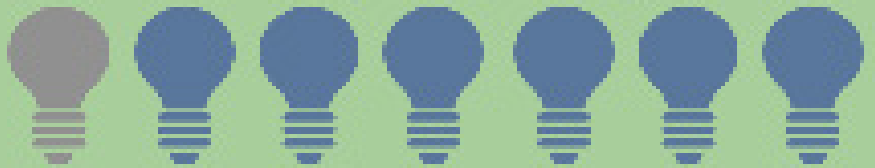

Public power utilities are not-for-profit, meaning they are beholden to their customer-owners, not shareholders.

2,011 public power utilities of all sizes exist across the U.S. Some serve entire states, while others serve as few as one customer.

14%

One in seven Americans is served by public power

AMP HAS 135 MEMBERS IN NINE STATES
